Profile

Hello, I am Raşit 27 years old. I am dealing with software and I believe that the future will be shaped in this direction. If I need to talk about myself, I try to discover new things and always keep myself up to date. I first met software in high school and continued in this department at university. While starting my career, I started working in the first software company, then I completed my military service and continued in the same branch but in another company.

My adventure, which started with the "C" language at first, has now been replaced by NodeJs, NestJs, TypeScript and JavaScript, so you will understand that the web has attracted my attention more. Right now, I want to improve myself a little more and focus on Python language if I can find time.

Employment History

Dec 2022

Alanya

Backend Development at Morphosium Yazılım Ve Donanım Hizmetleri Ticaret Ltd. Şti.

- Developed a RESTful API that allowed the app to integrate with backend services, resulting in enhanced user experience
- I also wrote a microservice with Nodejs, TypeScript for a mobile project and used RethinkDB for instant data storage and JSON transfer and deletion of data at the end of the day.
- I made integrations to PAYTR and PARATIKA payment systems in some of the services I have done during the time I worked in the company. I also made E-Invoice integration to PARATICA, the accounting programme.
- During the time I worked in the company, ClickHouseDB was among my experiences. I used it in the field of storage and data processing of millions of data from the device in IOT parts.
- Optimized database queries to improve application performance and reduce response times by 100%
- Implemented a microservices architecture that improved system modularity and reduced dependencies between components
- Refactored legacy code to improve reliability, scalability and maintainability
- Developed a secure authentication system that met industry standards for data protection and privacy
- Developed test plans, test cases, and test scripts to ensure the highest level of software quality
- Developed an end-to-end testing procedure that ensured the system behaved as exected
